AMETEK Brookfield

Proven World-Class Scientific Instrumentation

Since 1934, AMETEK Brookfield has been a trusted leader in scientific laboratory instrumentation. As the pioneer of the original viscosity measurement instrument, we set the global standard still recognized today. Over the decades, our innovative approach and deep industry expertise have allowed us to continually evolve – offering a broad range of reliable, regulatory-compliant solutions for critical material characterization across diverse industries.

- **Viscometers & Rheometers**: Measure fluid flow and material behavior with precision and ease
- **Powder Flow Testers**: Analyze powder flow to improve processing and packaging
- **Texture Analyzers**: Test material texture to ensure quality and consistency
- **Computrac® Moisture Analysis Instruments**: Fast, chemical-free moisture analysis- no reagents required
- **Jerome® Toxic Gas Analyzers**: Detect hazardous gases with portable, real-time accuracy

Our reputation for quality, accuracy, and unwavering customer support has made AMETEK Brookfield a globally respected name. When you choose our instruments, you're choosing tools known for their precision, repeatability, and long-term reliability – empowering your teams to make informed decisions and achieve consistent, high-performance results.

Repeatable **Reliable** **Accurate**

History of AMETEK Brookfield

1934

- Brookfield Engineering was founded
- First Dial Viscometer becomes lab standard used globally

1978

Release of TT100 line of products & DVE

1980
DV1 was launched

1986
DV2 was introduced

1992
DV3 was launched

1993
Introduction of Rheocalc software

1994
CapCalc software was launched

1995
Wingather software was launched

1996

Launch of PVS

1997

CAP 1000 was launched

1998
David Brookfield became CEO

2001
Rheovision software was launched

2002

- Launch of CAP 2000
- Brookfield became ISO 9001 certified

2003
AST was launched

2008
TexturePro software and CT3 were launched

2013
RheoCalcT software and DV2T were launched

2016
AMETEK acquired Brookfield

2017
AMETEK acquired Arizona Instrument

2018

CTX launched

2019

DVNext and RSO were launched

2020

Launch of Computrac® Vapor Pro® XL Autosampler

2021

Launch of RSX

2022

Launch of DVNext magnetic coupling C/P

2023

Launch of DVPlus Connect

2024

- Launch of HPQA
- Celebrated 90 years anniversary

2025

Launch of DV2Plus and DV360 Software

PERFORMANCE VS PRICE: COMPARING LAB INSTRUMENTS

Overview of Instrument Offerings

Price

Dial
Original that set the Worldwide Standard
- Original Viscometer

DVPlus
Entry Level Viscometer
- Essential Viscosity Measurement
- Easy-to-Use

DV2Plus
Global Viscosity Standard
- Real-Time Test Insights
- Advanced Data Management

DVNext Cone/Plate
- Magnetic Cone/Plate
- Absolute Viscosity in Small Samples

DVNext
Advanced Precision
- Easy-to-Use
- Stand-Alone
- Viscosity & Yield Stress
- 21 CFR Part 11 Compliance

RSX Cone/Plate
Advanced Rheometer
- Controlled Rate & Stress Measurements
- Small Sample Size
- Rapid Set-Up & Cleanup

RSX Coaxial Cylinder
Advanced Rheometer
- Concentric Cylinder Measurement
- Low Viscosity Fluids

RSO
Premium Rheometer
- Air Bearing
- Viscoelastic Material Behavior

RSX SST Rheometer
- Designed for controlled rate and controlled stress measurements
- Large, user-friendly 7-inch touch screen
- Quick-connect coupling system

Performance

SPECIAL PURPOSE INSTRUMENTS

KU-3 Viscometer
Paints, Coatings & Ink Applications
- Krebs Units, Gram Units & Centipoise

CAP 2000+
Durable Variable Speed Viscometer
- Small Sample Volumes
- Accurate Temperature Control

PFT
Powder Flow Behavior
- Quick & Easy Analysis
- Industrial Processing Equipment

CTX
Advanced Compression & Tension Testing
- Interchangeable Load Cells
- Deflection Compensation

MAX 4000XL
Rapid, Reliable Moisture & Solids Analysis
- Loss-on-Drying Analyzer
- High-Performance

MAX 5000XL
Moisture, Solids & Ash Analyzer
- Accurate Readings from a Single Sample

Vapor Pro XL
Moisture Analyzer
- Chemical Free
- Alternative to Karl Fischer Titration

Proven Accuracy. Trusted Reliability. Lasting Performance.

For decades, AMETEK Brookfield's instruments have delivered unmatched precision and consistency- even in the most demanding environments. The results you achieve today will match those you generate years from now, thanks to our commitment to stability, repeatability, and quality engineering.

Regulatory-Ready Performance

DVNext combines intuitive operation with powerful capability for viscosity and yield stress testing – all in a compact, stand-alone design that meets 21 CFR Part 11.

Viscoelastic Testing, Simplified

RS family of stand-alone, benchtop rheometers make advanced viscoelastic measurements more accessible than ever, with high-performance touchscreen systems tailored for specialized material analysis.

Moisture Analysis, Reinvented

Computrac® Vapor Pro® XL Autosampler offers a reagent-free solution for moisture testing – handling up to 16 samples with individualized test profiles. It's the safer, cleaner, and smarter alternative to Karl Fischer titration.

Applications

Food & Beverages

Corn Starch

Baking Soda

Brownie Mix

Almonds

Ground Cinnamon

Mayonnaise

Cooked Meat

Bread

Apple Juice

Cheese Puffs

Chocolate

Butter

Coffee

Chips

Applications

Pharmaceutical, Medical & Personal Care

Tablets

Lipstick

Shampoo

Hair Gel

Cough Syrup

Soap

Eye Liner

Baby Formula

Facial Powder

Petroleum Jelly

Applications

Plastics, Chemicals, Paints & Inks

Paints

Bentonite Clay

Detergent

Engine Oil

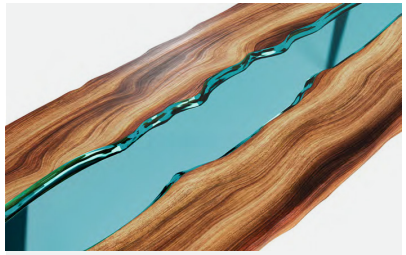

Gypsum

Flooring Adhesive

Auto Paint

Curing or Gelling Materials

Chemicals

Epoxy Resin

Applications

Energy, Oil, Gas, Environmental & Education

Landfill

Batteries

Wastewater Treatment

Oil Industries

Universities

Gas

Environmmental Agencies

First Responders

Industrial Hygiene

Powerplants

Mining

Biomass

Viscometers

Industry leading fluid dynamics measurement from QC testing to advanced rheological research, known for unmatched accuracy, stability, and ease of use

- Torque measurement accuracy: ±1.0% of full-scale range
- Repeatability: ±0.2% of full-scale range

DVNext Compliant

21 CFR Part 11 Compliant Rheometer

- 21 CFR Part 11 Compliant
- Digital leveling
- LIMS connectivity
- Gel-timer functionality
- Hand-held scanner for bar code detection
- Accessory detection
- Optional magnetic coupling attachment

Recommended Software:

- DV360

DVNext

Full-Featured Rheometer

- Digital leveling
- Start-up wizard
- Gel-timer functionality
- Optional magnetic coupling attachment
- Optional bar code scanner

Recommended Software:

- DV360

DVNext Cone/Plate

Rheometer for Small Sample Sizes

- Small sample size
- Defined shear rate
- Electronic gap adjustment
- Touch screen display
- Auto-zero function
- Auto-range function

Recommended Software:

- DV360

Viscometers

Industry leading fluid dynamics measurement from QC testing to advanced rheological research, known for unmatched accuracy, stability, and ease of use

- Torque measurement accuracy: ±1.0% of full-scale range
- Repeatability: ±0.2% of full-scale range

DVPlus™

Entry-Level Instrument for all Viscosity Needs

- 5-inch touch screen display
- Advanced interface with a real-time test indicator
- USB and Bluetooth connectivity
- 740 speeds for an excellent range capacity
- Temperature offset set capability to ±5°Ct
- Continuous sensing

Recommended Software:

- DVPlus Connect

DV2Plus™

Global Standard for Viscometer

- 7-inch full-color PCAP touchscreen
- Favorites menu
- Viscosity wizard for guided test setup
- Post-test graphing, torque vs. time
- Integrated connectivity
- Bluetooth enabled, optional
- Ultra-fine control with 740 speeds
- Gel Timer functionality
- Digital leveling

Recommended Software:

- DV360
- DV Create

Special Viscometers

Dial Reading Viscometer

The Original that Set the World Standard

- Easy set-up, simple to use & select speeds
- Continuous torque sensing capability
- Electronic drive, quiet, reliable operation
- Analog display shows % torque; use Factor Finder to convert reading to centipoise
- Accuracy: ±1.0% of range, Repeatability: ±0.2%

KU-3 Viscometer

Ideal for Paints, Coatings, Inks, and Pastes

- ASTM D562 compatible
- LED display in Krebs Units, Grams, and Centipoise
- Magnetic spindle coupling
- Easy to use, no weights, simplifies established test procedure
- Accommodates standard pint, ½ pint, and quart cans

CAP 2000+

Viscometer Specific for Paints and Coatings

- Broad shear rate range
- Peltier temperature control
- Excellent for paints and coatings

Recommended Software:

- Capcalc

Inline Process Viscometers

FAST Viscometer

Rugged, No-Maintenance Inline Viscometer

- Unique micro rotational sensor
- No moving parts, no maintenance
- Unaffected by external vibration
- Flexible vertical or horizontal installation
- True temperature readings to 120°C

VTE Electric Viscosel

Inline Viscometer for Paints and Coatings

- Convenient & inexpensive
- Sensitive response ensures continuous conditioning of fluid
- Process measurement for real time control
- Simple to change viscosity range

Rheometers

Touchscreen control to predict and understand material performance, such as flow during processing, product texture, and stability in emulsions, suspensions, and gels

- Quick and easy
- Providing insights how materials deform and flow under stress conditions through characterization of flow behavior and viscoelastic properties

RSO

Full-Featured, Oscillatory Rheometer

- User-friendly touch screen
- Auto spindle recognition
- Automatic gap setting
- Rapid temperature control
- Air Bearing Motor for Oscillatory measurements

Software:

- Rheo3000

PVS Rheometer

Ideal for High Temperatures and Pressures

- Highly portable with 1' x 1' x 2' footprint
- Measures samples at pressures up to 1000 psi
- Measures under temperature conditions: -40°C to +260°C

Included (required) Software:

- Rheovision

Rheometer RSX Family

- High-end touchscreen Rheometers
- Intuitive user Interface for simple stand-alone operation
- Large, user-friendly 7” Touch Screen
- High torque motor for testing challenging samples
- Quick connect coupling system for easy spindle attachment
- Automatic spindle recognition with integrated barcode reader
- Quick test functionality allows for testing within minutes
- Rugged design for the production floor and industrial use & applications
- Provides both Controlled Shear Rate (speed) and Controlled Shear Stress (torque) measurements

Recommended Software:
- Rheo3000

RSX Cone Plate

Ideal for measuring small sample volumes and difficult to clean materials

- Peltier and Fluid Heat (external bath) options available for rapid and accurate temperature control
- Very small sample size for rapid test setup and cleanup
- Controlled shear stress/shear rate operation
- Automatic spindle gap setting with standard one-piece spindles
- Spindles available for both Cone – Plate and Plate –Plate measurements

RSX Soft Solid Tester

Ideal for pastes, slurries, and materials with particulates

- Vane Spindle Geometries to measure paste-like materials and other challenging soft solids
- Motorized stand with auto-immersion feature to automatically insert the vane spindle into the sample to the correct depth
- Powerful 200 mNm motor for higher viscosity materials
- Included adjustable sample stand allows secure handling of a variety of container shapes and sizes
- Can be used in CC (coaxial cylinder) mode with purchase of optional CC adapter mount, coaxial cylinder spindles, water jackets, and accessories

RSX Coaxial Cylinder

Superior Viscosity Profiling and proven design for volatile samples

- Temperature control from -20°C to 180°C with choice of direct immersion in bath or external circulation using the FTKY3 water jacket
- Quantifies properties like Viscosity Profiling, Thixotropic Response, Creep Analysis, and Yield Stress Determination
- Use of cylindric geometries provides the most accurate measurement results, especially in the low-viscosity ranges
- Ideal for samples that readily evaporate and may prove challenging with Cone-Plate geometries

Moisture Analyzers

Chemical-Free Moisture Analyzers

Computrac® Vapor Pro® XL series offers a reagent-free alternative to Karl Fischer titration, delivering accurate moisture analysis without the hassle of chemicals or glassware. With the Autosampler, users can automate up to 16 tests for high-throughput environments.

- **Reagent-Free Precision**: Accurately measures moisture from 10 ppm to 100% without hazardous chemicals or complex setup
- **High-Throughput Automation**: Autosampler enables unattended testing of up to 16 samples, reducing labor and increasing efficiency

Computrac® Vapor Pro® XL

Chemical-Free Moisture Analysis

- Zero chemical reagents
- RH-sensor measures moisture content
- Heater allows for more control over range of testing temperatures
- Detects as few as 10 micrograms of water
- Determines moisture content as low as 10 ppm
- Touchscreen interface reduces operator error

Computrac® Vapor Pro® XL Autosampler

Multi-sample Automated Chemical-free Moisture Analyzer

- All the same features as Vapor Pro XL
- Automatically measure up to 16 different samples

Moisture Analyzers

Loss-on-Drying & Ash Moisture Analyzers

Engineered for precision and durability, Computrac® MAX® 4000XL and 5000XL deliver rapid, reliable moisture, solids, and ash analysis across a wide range of industries. These rugged analyzers are ideal for both lab and production environments, offering unmatched versatility and compliance with industry standards.

- **Dual Functionality**: Perform both loss-on-drying (LOD) and loss-on-ignition (LOI) tests with the MAX 5000XL; the MAX 4000XL offers rapid LOD testing up to 100x faster than oven methods
- **Built to Last**: All-steel construction and durable heating elements ensure long-term performance in demanding environments

Computrac® MAX 4000XL

Loss-on-Drying Moisture & Solids Analyzer

- Precise, repeatable results
- Durable design for heavy-duty use
- Rapid cooling system
- Allows for a wide range of applications, from food to plastic to paper

Computrac® MAX 5000XL

Moisture, Solids & Ash Analyzer

- Accurate readings for both ash and moisture content from a single sample
- Fast readings in half an hour or less
- One-button operation with no intermediate steps required
- Durable design for heavy duty use

Powder Flow Tester

Essential for understanding how powders behave during production and processing, impacting manufacturing efficiency and product quality

- Quick and easy
- Enables product development teams to test flow properties of new recipes and mixes, optimizing processes and preventing costly downtime

PFT

Powder Flow Analyzer

- Multiple test options
- Tests powders for formulation, characterization and QA/QC
- Compact design - easily fits on a workbench

Recommended Software:

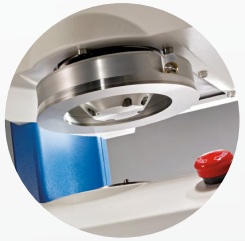

- Powder Flow Pro

Accessories

Vane Lid

- Used for flow function test

Friction Lid

- Wall friction lid
- Used for wall friction test and density test

Outer and Inner Catch Trays

- Reversible scraper tool
- Inner catch tray
- Outer catch tray
- Trough

Texture Analyzers

Vital for measuring and analyzing the textural properties of materials supporting new product development, quality control, and research by assessing properties such as hardness, brittleness, and adhesiveness, ensuring product consistency and quality

- Easy-to-use
- Reliable, customizable testing, including compression and tension, for consistent product performance and quality

CTX Texture Analyzer

Full-featured Texture Analyzer

- Deflection compensation for the most accurate measurements
- Interchangeable load cells for optimal flexibility (eight choices ranging from 100g to 100kg)
- Easy-to-use texture analyzers measure compression and tension of materials in a wide variety of industries
- Extended boom for longer reach testing
- Three adjustable base tables for more versatile sample testing

Recommended Software:

- Texture Pro

Accessories

CTX has a variety of probes, fixtures for testing broad categories of packaging materials, foods of all types, cosmetics, pharmaceuticals, and mechanical devices

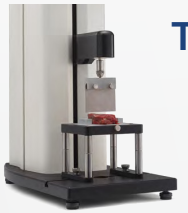

TA-DEC

- Dual extrusion cell
- Used for forward and back extrusion of fruit puree, pudding, yogurt, or similar products

TA-STF

- Quantifies the spread force of a material
- Comes with 1 male cone probe, 5 sample cups, and 1 cup holder

TA-SBA-WB-1

- 1 mm shear blades
- Used for cutting-shear test of meat, fish, sausage, etc.

TA-52

- Used for cutting tests
- Perfect to test meat, poultry, fish, or similar products

TA-TPB

- Three point bend fixture
- Used to determine the hardness of products like hard tablets, granola bars, energy bars, etc

TA-CTP

- Compression top plate
- For applying uniform compression force on samples up to 4x6 inches

Jerome® Toxic Gas Analyzers

For over 5 decades, Jerome® has delivered unmatched sensitivity and reliability in effective detection and monitoring of mercury vapor and hydrogen sulfide, ensuring safety and compliance serving environmental agencies, industrial hygienists and emergency responders worldwide. Portable and powerful compact design is ideal for on-the-go analysis. Easy to use, Jerome® is tailored for robust performance in both industrial and residential environments.

Mercury Vapor Analyzers

Set the standard in mercury vapor analysis with features that ensure accurate, reliable measurements:

- Low-Level Detection: J405 detects levels as low as 0.5 µg/m^3; J505 as low as 0.05 µg/m^3
- Data Logging: Up to 20,000 samples on J405 and 10,000 on J505 with detailed information
- Enhanced Durability: Both models boast rugged, ergonomic designs suitable for tough environments
- User-Friendly Interfaces: Simplified operation with intuitive menus and USB connectivity for easy data transfer
- Regulatory Compliance: Meets stringent standards set by EPA, ATSDR, and other regulatory bodies

Jerome® J505

Hand-held Atomic Fluorescence Spectroscopy Mercury Vapor Analyzer

- Lightweight (6.5 lbs)
- Atomic fluorescence means no regenerations or downtime needed
- Exceeds EPA standards for industrial/residential remediation
- 18 hours of battery life per charge

Jerome® J405

Gold Film Mercury Vapor Analyzer

- Sensitive detection limits, ideal for industrial and residential cleanup
- Durable design for use in any environment
- 24 hours of battery life per charge
- Features onboard data logging for up to 20K measurements
- USB data transfer & SCADA interface capabilities
- Proven as the gold standard in mercury detection for decades

Hydrogen Sulfide Analyzers

Engineered for exceptional hydrogen sulfide detection:

- Ultra-Low-Level Detection: Both the J605 and X631 detect as low as 3 ppb
- Gold Film Sensor: Decades of validation ensure reliable, repeatable results
- Versatility: Suitable for wastewater facilities, landfills, and industrial settings
- Rugged Construction: Both analyzers are designed to withstand harsh conditions
- Regulatory Compliance: Used worldwide by many regulatory agencies and landfill, water treatment and waste management facilities

Jerome® J605

Hydrogen Sulfide Analyzer

- Intuitive Interface: Easy-to-use, menu-driven controls simplify operation
- Survey Mode: Continuous sampling helps identify hot spots quickly
- 18-Hour Battery Life: Ensures continuous operation for extended periods
- Field Regeneration: Integrated battery-powered sensor regeneration enhances testing capabilities in the field
- Data Logging: Extensive sample storage capabilities for comprehensive analysis

Jerome® X631

Hydrogen Sulfide Analyzer

- Broad Detection Range: Effectively monitors very low to moderate H2S levels
- Optional Data Logging and Auto Sample Mode: Enhances monitoring flexibility
- Field Regeneration: Optional kit allows in-field sensor regeneration
- Simple Operation: Accurate readings with the push of a button, even in challenging environments

Temperature Control

Ensure accuracy in high-temperature testing with precise thermal management such as hot melts, asphalt, wax, and polymers

Thermosel System

- Provides control of sample temperature for 40°C to 300°C
- Programmable controller offers single set point or up to 10 programmable set points
- Compatible with standard Brookfield Viscometers and DVNext Rheometers
- Disposable spindle/chambers option
- Ideal for asphalt or any other difficult-to-clean material

Water Baths

Maintain stable sample temperatures for accurate, consistent, repeatable viscosity results

MX Series

- Economical
- Large character display
- Single speed pump
- Maximum temperature up to 135°c

SD Series

- Programmable with PC control using RheolcalcT / DV360
- 2-Speed pump
- Quick scroll to set temperature to standalone mode

AP Series

- Touch screen interface
- Standalone programmable
- Variable speed pump
- PC control using RheolcalcT / DV360

TC-150

- Compact
- Built-in circulator pump
- Built-in tap water cooling coil
- For use with water-jacketed devices

TC-250

- Configured for measuring multiple samples directly in the bath
- Work area accommodates 600 mL and 1000 mL beakers
- Built-in tap water cooling coil
- Built-in circulator pump

Lauda Loop 100

- Advanced Peltier technology
- Compact size and lightweight construction
- Environmentally friendly

TC-550

- Standalone operation
- Easy control of set-point
- Configured to measure viscosity directly in the bath - accommodates 600 mL beaker
- Programmable Controller version is designed to automate sample temperature control
- Built-in circulator pumps to external devices

TC-650

- Compact – small "footprint" on your lab bench at only 8-1/4 inches wide
- For use with water-jacketed devices
- Provides standalone operation - no tap water required
- Easy control of set-point
- Programmable Controller version is designed to automate sample temperature control

Viscosity Standards

Convenient method to verify pass/fail control, ensuring acceptable performance limits between calibrations of your viscometer or rheometer

- Accurate to +/- 1.0%
- NIST traceable
- Hydrocarbon-based mineral oil or polybutene

CAP Oil Fluids

Used for calibrating CAP series viscometers

- Appropriate for use at shear rates greater than 500 sec-1
- Recommended for use with cone/plate viscometers at viscosities above 5,000 cP

High-Temperature Silicone Fluids

Used with the AMETEK Brookfield thermosel accessory

- High-temperature silicone fluids are newtonian fluids calibrated at 25°C, 93.3°C, and 149°C
- Excellent temperature stability
- Economical option

Special Order Silicone Fluids

Custom viscosity or temperature ranges of silicone fluids

- Excellent temperature stability
- Special viscosity values and temperature calibrations available upon request

General Purpose Oil

Used for calibrating cone/plate viscometers/rheometers and krebs spindle geometry instruments

- Appropriate for use at shear rates greater than 500 sec-1
- Recommended for use with cone/plate viscometers at viscosities above 5,000 cP

Krebs Viscometer Oil Fluids

Used with the AMETEK Brookfield KU series Viscometers

- Appropriate for use at shear rates greater than 500 sec-1
- Recommended for use with cone/plate viscometers at viscosities above 5,000 cP

VisCal Kit

Used to calibrate all AMETEK Brookfield viscometer/rheometers

- Perfect for first-time viscometer/rheometer buyers
- Everything needed to verify calibration in one conveniently packaged kit

General Purpose Silicone

Used to verify AMETEK Brookfield lab viscometers/rheometers' calibration

- Excellent temperature stability
- Economical option

Accessories

Enhanced UL Adapter

Designed for Low Viscosity Materials

- Multiple test options
- Automated analysis
- Compact design

HPQA™, Helipath Quick Action Stand

Motorized quick action stand for all viscosity testing

- Helipath action for non-flowing materials such as gels, pastes, and creams
- Quick Action Stand Capabilities
- Simple to set up and clean
- T-Bar Spindles
- Magnetic and Threaded coupling option
- Integrates with DVPlus and DV2Plus

Small Sample Adapter

Ideal for Small Samples

- For rheological material evaluation using limited sample volumes
- Sample chamber easily changed
- Optional disposable chamber
- Rapid sample temperature control

DIN Adapter

Ideal for Small Sample Volumes

- Complies with DIN 53019
- Can measure small sample volumes
- Cylindrical geometry provides defined shear rates
- Compatible with any standard AMETEK Brookfield DV Viscometer/Rheometer

Spindles, Cones, Cups, & Chambers

- A range of spindles to meet a variety of needs (CAP, Helipath T-bar, KU-3, RSX spindles, etc)
- Cones and cups are used with standard AMETEK Brookfield cone/plate series viscometers and rheometers

Vane Spindles

- 3-piece spindle set for versatile range capability
- Keeps particles in suspension during testing cycle
- Provides information on yield behavior at low rotational speeds
- Follows industry recommendations on length/diameter ratios for vane spindles
- Magnetic spindle coupling option

Software

AMETEK Brookfield's software is available to control our instruments and automate data collection

DV360 - DV2Plus, DVNext

- Intuitive user interface
- Workflow for easy execution of everyday tasks
- Guided questions to easily set up test methods
- Comparison reports, including data analysis comparison and math models
- 21 CFR Part 11 Compliant version available

Rheo3000 - RSO, RSX

- Program by controlled stress/rate
- Automate viscosity vs. temperature testing
- Optional features for 21 CFR Part 11 compliance
- Quality control limits for pass/fail tests
- Automated analysis of collected data
- Calculate yield and average viscosity

Texture Pro - CTX

- Wizard guides user through creation of common tests
- Simplified user interface
- Filters for searching and managing existing data
- Easy export, import, and data deletion
- Compare data by loading up to 20 distinct data sets within the graph
- Optional features for 21CFR compliance

Powder Flow Pro - PFT

- Flow Function, Wall Friction, Time Consolidated Flow Function, and Bulk Density Tests
- Graphically plot normal and shear stress values
- Display up to 8 different flow function curves

DV Create - DV2Plus

- Build up to 25-step test methods
- Enhances viscosity test efficiency with real-time monitoring and data saving
- Converts DV2T/DVNext files to be used with DV2Plus

Capcalc - CAP 2000+

- Automated data collection eliminates operator error
- Easy-to-read instantaneous viscosity flow curves
- Records up to 1000 data points per test
- Yield stress calculations (Bingham Plastic, Casson, Power Law, and Consistency Index)

DVPlus Connect - DVPlus

- Time-saving app that automates test data and creates permanent records
- Enhances the efficiency of the viscosity test process by monitoring tests in real time, and viewing and saving the test data
- USB and Bluetooth Connection options available

Rheovision - PVS

- Ability to control multiple PVS units
- Easy calibration and built-in linearity check
- Instantaneous flow curves
- Built-in math modeling
- User-friendly ramp wizard for quick API testing

Knowledgeable Expert Support

Our goal is to empower customers with the information they need to make informed decisions. We embrace a partnership approach, helping customers navigate challenges and achieve their objectives with the support of our experienced Application Engineers and state-of-the-art laboratory.

Key Services:

- **Application and Technical Support**: Ongoing guidance and prompt assistance to maximize the potential of our instruments and methodologies, ensuring optimal results for your applications. Contact us via phone or online form with detailed information about your issue.
- **Sample and Material Testing**: Evaluating finished products and raw materials for consistency, quality, composition, strength, and durability to ensure they meet specified standards.
- **Method Development and Recommendations**: Designing and refining testing protocols, selecting appropriate parameters, and optimizing conditions to meet your specific needs. Expert evaluations help identify the most suitable instruments and methodologies.
- **Independent Verification**: Providing reports for varying viscosity results obtained by producers and suppliers for the same material.

Additional Resources:

- **Resource Library**: Access operations manuals, quick start guides, application notes, product change notices, and more on our website.
- **FAQ Pages**: Find answers to common questions and helpful information.

We're committed to your success, offering the support and expertise you need to achieve your goals.

Brookfield University: Education & Training

We offer flexible learning opportunities to enhance your expertise in material characterization, including viscosity, rheology, texture analysis, powder flow, moisture analysis, and toxic gas detection. Our seasoned experts, with decades of experience, provide practical insights and cutting-edge techniques.

Benefits Include:

- **Instrument Mastery**: Hands-on or online demonstrations covering setup, operation, and practical techniques.
- **Testing Methodology**: Guidance on applying various tests for consistent results.
- **Calibration Verification**: Detailed procedures for accurate instrument calibration.
- **Data Interpretation**: Training in analyzing and interpreting data for informed decision-making.

AMETEK BROOKFIELD UNIVERSITY

Platform Options:

- **Live Webinars**: Engage from home or office.
- **In-Person Workshops**: Interactive sessions with expert insights.
- **Global Onsite Training**: Personalized instruction and demonstrations worldwide.

Calibration, Certification & On-Site Services

We provide comprehensive service programs to ensure optimal instrument performance, including:

- **Annual Calibration and Certification**: Ensures reliable and accurate results, conducted by certified technicians from ISO-certified facilities.
- **Onsite Calibration and Repair**: Minimizes production disruption and downtime, avoiding shipping costs and potential damage, with added expert advice on preventative maintenance.

For service, contact us to obtain a Return Authorization Number before shipping your instrument.
